Having an Endobronchial Ultrasound (EBUS) Patient Information Department of Respiratory Medicine . 2 This leaflet will help you and your family to understand more about EBUS. Please read it and ask any questions you may have. The specialist will ask you to confirm that you have read it and explain the procedure to you personally, before asking you to sign a consent form. This will either be ...

Having an Endobronchial Ultrasound (EBUS)

An endobronchial ultrasound is a medical procedure that may be performed during a bronchoscopy, to provide further information to diagnose or determine the stage of a lung cancer. This relatively new technique allows doctors to view regions of your lungs and surrounding chest area that have traditionally required more invasive surgical procedures to evaluate.

Endobronchial Ultrasound Procedure - verywellhealth.com

An endobronchial ultrasound can show if it's lung cancer and the size of the tumour. It can also show if the cancer has spread into other areas of the lung or outside the lung. How you have it. A bronchoscopy uses a narrow flexible tube to look at the inside of the breathing tubes (airways) in your lungs. The tube has an ultrasound probe. It uses high frequency sound waves to create pictures of the lungs and structures outside the airway walls, such as the lymph nodes.

Bronchoscopy and ultrasound (endobronchial ultrasound ...

Endobronchial ultrasound is a relatively new diagnostic technique that can be used to investigate problems inside the lungs or in the chest area between the lungs. This is a difficult area to visualise and this used to be done using a combination of X-rays, CT scans and standard bronchoscopy .
