A timber frame lintel is the perfect solution for use with timber frame construction. Our range can be suit wider cavities.

Timber Frame Lintel for Construction with Wider Cavities ...

The weight of the timber floor itself consists of the timber joists, the plasterboard ceiling underneath it (except for suspended timber ground floors), the floorboards and the nails or screws used to fix both of the aforementioned coverings.

Surveyors' floor joist span tables for floor construction ...

Timber strength and spans Timber used for structural applications must be graded and clearly marked to show it complies with the correct standards and strength requirements laid down by building codes and regulations. The load a member can carry depends on several factors, including its span, thickness, width and species. Usually the deeper/wider the section, the longer the span. Different ...

Timber strength and spans

Span tables allow users to choose an appropriate size and stress grade to achieve spanning needs. For simple construction, such as domestic construction, this can be determined from span table supplements in AS1684.2 and AS1684.3. Other (more complex) load condition spans can be determined with our free Hyne Timber Design 7.5 software.
